June 13, 2005

Dear Senator:

On behalf of the National Right to Life Committee (NRLC) and our 50 state affiliates, we write to urge you to oppose H.R. 810 and its companion bill, S. 471. H.R. 810/S. 471 is legislation to mandate federal funding of research that requires the killing of human embryos. NRLC will include any roll call on passage of this legislation in its scorecard of key pro-life votes for 2005.

Each human being begins as a human embryo, male or female. The government should not fund research that requires the killing of living members of the species *Homo sapiens*. H.R. 810/S. 471 would require federal funding of research projects on stem cells taken from human embryos who are alive today, and who would be killed by the very act of removing their stem cells for the research -- a practice very different from that of the human being who dies of natural causes or by accident and whose organs are then donated to others.

Stem cells can be obtained, from umbilical cord blood and from many types of "adult" (non-embryonic) tissue, without killing human embryos. Already, humans with at least 58 different diseases and conditions have received therapeutic benefit from treatment with such "adult" stem cells. In contrast, embryonic stem cells have not been tested in humans for any purpose because of the dangers demonstrated in animal studies, including frequent formation of tumors.

One ethical source of stem cells is umbilical cord blood. On May 24, the House of Representatives passed the Stem Cell Therapeutic and Research Act (H.R. 2520), sponsored by Congressman Chris Smith, by a vote of 431-1. This bill will establish a new federal program to make stem cells extracted from cord blood available to patients who need them. We encourage you to support this legislation, which will advance stem cell therapies, without "promot[ing] science which destroys life in order to save life," as President Bush said on May 20 regarding H.R. 810.

Those who favor federal funding of research that kills human embryos sometimes claim that these embryos "will be discarded anyway," but this need not be so. Many human embryos have been adopted while they were still embryos, or simply donated by their biological parents to other infertile couples. Today they are children indistinguishable from any others, as the nation saw when President Bush met with a group of these children and their parents on May 24.

For additional information, please contact the NRLC Federal Legislation Department at 202-626-8820 or [Legfederal@aol.com](mailto:Legfederal@aol.com). Additional resources are available at the NRLC Human Embryos webpage at [www.nrlc.org/killing\\_embryos/index.html](http://www.nrlc.org/killing_embryos/index.html) and at <http://www.stemcellresearch.org/>. Thank you for your consideration of our objections to H.R. 810/S. 471.

Sincerely,
